

GIGA KIT

for under pressure Giga tees installation

CHARACTERISTICS

1 → Applications

Giga kit is used in the installation of **Giga** 2½", 3" and 4" tees. Contains the necessary elements for drilling pipes of cast iron and asbestos cement.

2 → Versions

Supplied in two versions: Standard and Complete. The standard version does not contain the drilling machine or the ratchet wrench and must be used with Golf or Cedec equipment. The complete version contains all the elements needed to drill the pipe and fit the saddles.

3 → Components

On the back of the paper, you will find a table with the list of components in each of the equipment sets.

4 → Toolbox

Made of damp-proof plywood with metal corner reinforcements. Interior divided into sections for storing the material correctly.

5 → Drilling machine

The drilling machine, supplied in the complete version, is manufactured completely in hardened steel. The compact nature of this drilling machine makes it ideal for use in areas with restricted accessibility. It comes with a drain valve for emptying shavings accumulated during drilling. This same drill, along with the Giga kit components, is used to install the 2½", 3" and 4" under pressure Tees.

6 → Operating the drilling machine

The drilling machine is designed to be activated by means of the ratchet wrench, which is supplied along with the kit, or with an electric, pneumatic or hydraulic motor.

7 → Cutters

The kit includes the cutters and drill bits necessary for perforating ductile iron and cement asbestos pipes. All the **Torre** cutters have an exclusive system for securing them to the drill by an octagonal connection. FDW cutters can be used on ductile iron pipes up to DN 300 and on cement asbestos pipes up to DN 300 Class D.

8 → Kit maintenance

In spite of the fact that this kit does not require any special maintenance, it is advisable to clean and lubricate the drilling machine from time to time. It is also recommended to dry the kit after each use to avoid limescale deposits.

9 → Spare parts

All the components in the Giga kit can be purchased separately as spare parts.
